Fall leaves provide beautiful color on trees, but in local waters they contribute to green algae blooms - not so pretty.

Stormwater is rain or snowmelt and water like overwatering the lawn or letting fertilizer runoff in. We can choose products carefully and shape our lawns and pavement so water sinks in. When we do, pollutants filter out and groundwater is protected.

Keep Your Leaves On Your Property

A great way to make sure leaves do not end up in local waters is to keep them on your property! Much leaves in place by making several passes over the leaves with a mulching mower. This will keep leaves on your lawn and provide it with nutrition it needs for healthy grass next spring.

Collect leaves and spread them in garden beds or under shrubs. Here leaves provide valuable protection for plants through the winter.

Composting

Collecting leaves is a valuable resource for your garden or houseplants. Collect leaves and spread them in garden beds or under shrubs. Here leaves provide valuable protection for plants through the winter.

Composting

Composting is recycling your lawn trimmings and food scraps into a nutrient-rich soil that can enrich your garden or houseplants. Cold composting requires little maintenance but can take up to 2 years to complete. To create a cold compost pile, mix non-woody yard wastes and let them sit for 1-3 months. To create a hot compost pile, compost can be reached in 1-3 months. To create a hot compost pile, mix non-woody yard wastes and let them sit for 1-3 months.

Dry composting requires regular maintenance such as turning and watering the pile. Compost can be reached in 1-3 months. To create a hot compost pile, mix non-woody yard wastes and let them sit for 1-3 months.
