Background

In response to recent national calls for racial justice, inclusivity and equity for historically oppressed and marginalized peoples, Polco developed a Community Equity and Inclusion Survey. The survey results can be used to help local governments assess their community for inclusion. It also empowers underrepresented residents to improve their community by helping shape local policies. The questionnaire includes questions about issues such as safety, fairness, respect and how welcome residents feel inside of their communities. Polco/NRC hope that local governments will use the survey results not only to shape internal policy, but also to partner with the community to bring results to life.

The City of De Pere posted the survey on their Polco platform (an online civic engagement platform) on July 26, 2020 and received responses through August 25, 2020. A total of 279 responses were gathered during that time. The overall results can be viewed on the platform. However, to encourage communities to post the questionnaire and gather responses, Polco offered an additional “disparity analysis” to those jurisdictions who published the survey.

This document displays the results of the disparity analysis for De Pere. One of the questions on the survey asked respondents how welcoming they felt the community was to a variety of groups of people, such as those of lower income, those who had served in the military, those of various racial/ethnic backgrounds, etc. The chart on the next page shows the percent of people who said they believed the De Pere community was “**very welcoming**” to each group. In the green box in the upper left-hand corner is shown the groups to which more than 70% of respondents felt the community was very welcoming. Going clockwise, the next green box shows the groups to which fewer than 70% of respondents but more than half believed the community was very welcoming. In the lower right hand corner are the groups to which 40% to 49% of respondents considered the community very welcoming, while in the lower left hand corner are the groups to which fewer than 40% of respondents thought the community was very welcoming.

The charts on pages 3 to 10 show the percent of respondents of various demographic subpopulations who considered the community **very or moderately welcoming** to the groups displayed. The demographic breakdown shown is related to the groups of interest; for example, on page 7, it can be observed that respondents with lower incomes were less likely to feel the community was welcoming to people with lower incomes compared to respondents with middle and higher incomes. Some of the demographic subpopulations included fewer than 50 respondents, these are marked with an asterisk (*) on the following pages. For two of the groups, whether English was the respondent’s first language or not, or whether the respondent’s country of origin was the USA or not, there were too few respondents in one of the groups to create breakdowns. For others, multiple categories were combined into an “other” category to allow comparisons to be made.

Welcoming Communities

How welcoming, if at all, do you think your community is for . . .

Men (81%)

People who are White (81%)

People of Christian faith (76%)

People who are veterans or military personnel (75%)
